WAREHOUSE MANAGEMENT SOLUTIONS

—————————

**LogiStock - WebStock - RFStock**

RÉGENS

DESCRIPTION

The expert system of Régens Zrt. is based on the actual market demands. In the field of warehouse management and logistics we provide flexible responses to changing needs and dynamic adaptation to company growth.

Taking these aspects into account, we have developed our professional warehouse IT system. LogiStock provides reliable functionality even in case of several thousand items handled on a daily basis and under 24-hour operation.

The software supports the registry of a wide range of goods (food, components, etc.), handles diverse withdrawal strategies and works through online barcode readers as well.

FEATURES

- ✓ Multiple level of unit-of-measure conversion
- ✓ Registries of removals, orders, and placing in storage
- ✓ Adjustable removal method per item
- ✓ Automatic calculation method
- ✓ Reports
- ✓ Interface module for processing electronically executed tasks, sending feedbacks

MAIN AREAS OF USE

- Warehouses of raw material and finished goods
- Commercial warehouses
- Warehouses of logistics service providers

CONNECTION WITH RÉGENS SOFTWARES

In addition to handling warehouse processes, Régens also offers additional logistics solutions, which can be easily integrated into the LogiStock program's operations.

- RFStock module: online barcode reader devices to the software
- WebStock offers a web based surface for the consigners
- Connection with Régens Book invoicing module
- Delivery shipping tasks to the Régens Distribution
- Management information system connection

WEBSTOCK

WebStock module is connected to our LogiStock system. With this software solution we offer for the warehouse owners the possibility to monitoring the stock of goods or making delivery orders based on inventory.

WebStock is optimized for even phones, which makes it more a flexible.

Features

- ✓ Faster administration
- ✓ Reduction of the possibility of error
- ✓ Available inventory data from anywhere and anytime
- ✓ Resource savings

RFSTOCK

Régens always keeps in mind the needs of Customers and increases the efficiency of their daily work. This idea inspired us to create our RFStock barcode scanner module, which can make the warehouse processes faster, more efficient and more accurate.

RFStock can be easily integrated to the Régens logistics software's system.

Our forms are provided with a unique barcode and QR code, so with the additional module the incoming goods, the goods storage, the product identification, the compilation of inventories and the maintenance of article data can be easily done with one move.

One of the most recent features of RFStock is product identification. With the help of this function when the goods arrive, the data are shown in the software according to EAN13 or GTIN14. The employee has an immediate opportunity to correct the record item data according to the real data of goods (wrapping, weight, size).

Advantages of the RFStock module:

- ✓ Integrated to further Régens logistics softwares
- ✓ Fast product identification
- ✓ Speeding up workflow
- ✓ Efficient handling of goods
- ✓ Save on labor and time spent on administration
- ✓ Simple and accurate handling of goods, inventory taking
