

RÉGENS LOGISTICS® - GROUPE SHIPMENT

DESCRIPTION

Our software solution for companies engaged in groupage shipments provides increased control over subactivities, which leads to less time and resources wasted. There are multiple actors in groupage shipments, so individual mechanisms like automated accurate pricing and specific delivery mechanisms of partners are essential, and can also reduce the incidence of human error. The programme is optimised to manage transportation tasks between collection points and handle all related administrative obligations (warehousing, customs clearance, and invoicing). In case of fewer items, the programme is suitable for the management of diverse tasks (Full Truckloads, Less Than Truckloads, direct orders).
